IRISH BLOOD TRANSFUSION SERVICE PRODUCT MASTER FILE

TITLE: PLATELETS SUITABLE FOR NEONATAL USE

Change Description:

Revise IBTS/PMF/SPEC/0203 – 0218, 0220, 0221, 0224, 0226, 0227, 0232, 0236 to update the product labels in the appendices for each product.

Reason for Change:

Fix to the labels as part of the semester patch reference CC 126/19/IBTS and reference IBTS/QA/IQ/0600 Deviation 008

Change order No.:

IRISH BLOOD TRANSFUSION SERVICE PRODUCT MASTER FILE

Title: Platelets Suitable for Neonatal Use

Name of Products:

PLATELETS, Adult Dose, Suitable for Neonatal Use, Irradiated.

PLATELETS, Adult Dose, Suitable for Neonatal Use, Split 1/2/3, Irradiated.

An aliquot can be taken from any component above to make the following:

PLATELETS, Paediatric Dose, Suitable for Neonatal Use, Split 1/2/3, Irradiated,

E Progesa Codabar Component Codes: 39300 / 39301 / 39304 / 39307

39303 / 39306 / 39309.

E Progesa ISBT-128 Component Codes: C3929V00 / C3929VA0 / C3929VB0 / C3929VC0

C3929VAa / C3929VBa / C3929VCa.

General Description: A platelet preparation, with the majority of leucocytes removed, suspended in

plasma obtained from a single donor using automated cell separation

equipment. The selected donors meet the additional criteria for neonatal use.

General Specification:

Parameter	Quality Requirement	Frequency of Control
Volume	>40 ml per 60 x 10 ⁹ platelets	100 %
Platelet Content	\geq 200 x 10 ⁹ / unit	100 %
Leucocyte Content	< 1 x 10 ⁶ / unit	100 %
pH measured (+22°C) at the end of the recommended shelf-life	>6.4	1%

IBTS/PMF/SPEC/0216 Ver 4 Page 4 of 12

Labelling: See Appendices I and II

Storage: Platelets should be stored at 22° C $\pm 2^{\circ}$ C. The storage time is 7 days when

stored with continuous gentle agitation. An aliquot may be removed for which

the storage time is 6 hours. The storage time of the parent product is

unchanged.

Irradiation: Platelets are irradiated routinely during preparation.

Transportation: Transport containers should be kept open at room temperature for 30 minutes

before use. During transportation from the Irish Blood Transfusion Service to the place where they are intended for use, the temperature of platelets must be kept as close as possible to the recommended storage temperature. On receipt, unless intended for immediate therapeutic use, they should be transferred to storage with continuous gentle agitation on a device approved for the purpose,

at 22° C \pm 2° C.

Indications for Use: To provide platelet replacement where deficiency or functional abnormality is

causing significant haemostatic problems.

Precautions in Use:

• Swirling phenomenon must be demonstrated before infusion.

- Platelets must be infused intravenously through a fresh infusion set containing an in line 170 200 µm filter.
- Rh D negative female recipients of child bearing potential should preferably not be transfused with platelets from Rh D positive donors.
- Because of the temperature of storage and preparation the risk of bacterial contamination is increased.
- No solution should be added to the bag or giving set.
- Components should be inspected visually for defects, leakage, abnormal colour or visible clots.
- Not recommended in cases of plasma intolerance.

Adverse Effects Include:

- <u>Circulatory overload</u>
- <u>Haemolytic transfusion reaction due to transfusion of ABO-incompatible</u> plasma in the component.
- <u>Non-haemolytic transfusion reaction</u> (mainly chills, fever and urticaria). The risk is reduced by leucodepletion.
- Anaphylaxis
- <u>Pathogen transmission</u>
 - Despite careful donor selection and laboratory screening procedures, infections including Syphilis, Viral Hepatitis, HIV, HTLV 1 & 11 and other viruses and protozoa (e.g. malaria) may, in rare instances, occur.
 - vCJD transmission

- Transmission of other pathogens that are not tested for or recognised.
- The risk of CMV transmission is minimal as the components are leucodepleted
- Sepsis due to bacterial contamination (reduced but not eliminated by bacterial screening)

• Metabolic upset

- Citrate toxicity, especially in neonates and in patients with impaired hepatic function.

• Immunological effects

- Alloimunisation to HLA and HPA antigens
- Post Transfusion purpura (PTP), especially in parous female recipients
- The risk of Graft vs Host Disease (GvHD) in immuno compromised recipients is eliminated by irradiation
- Transfusion related Acute Lung injury (TRALI) by donor HLA/granulocyte antibodies

Serious Adverse Reaction

Please inform the IBTS immediately about any event relating to suspected bacterial sepsis/ transfusion associated bacterial sepsis

Serious adverse reactions should be reported to:

National Haemovigilance Office
